iMultiMix 16 USB

PROFESSIONAL MIXER AND RECORDING WORKSTATION WITH UNIVERSAL DOCK FOR iPod

new for 2008

THE PROFESSIONAL WAY TO MIX AND RECORD RIGHT INTO THE WORLD'S MOST POPULAR MUSIC DEVICE. The iMultiMix 16 USB is a sturdy, compact all-in-one tabletop mixer and recorder that features 100 studio-grade 28–bit digital effects, a built–in limiter and an integrated iPod dock with control wheel transport controls for fast, easy direct–to–iPod recording.

The iMultiMix 16 USB features integrated iPod control and recording capability at up to 44.1kHz, and represents the first 16-channel mixer to fuse together professional quality mixing, 3-band per-channel EQ, guitar/line inputs and iPod recording in a single, intuitive package. For ultra–clean live recordings of nearly any performance, including home studios, musicians, podcasters, and houses of worship, the iMultiMix 16 USB is the ideal solution.

Once recordings are completed simply use the convenient *Transfer to iTunes* feature to move your recordings to a computer with Mac OSX or Windows XP without need for special drivers or complicated set–up. All channels are mixed down to your computer at either CD-quality stereo 44.1 or 48 kHz.

The iMultiMix 16 USB can also playback music from the iPod, and mix your live performance instantly with the iPod. This makes the iMultiMix 16 USB perfect for using the iPod as a backing track for solo or band performances, while mixing sound sources all in one compact, convenient place.

FEATURES

- Integrated recording for iPod Classic, 5th gen. (Video), and 2nd or 3rd gen. iPod nano
